

Nature Jumble

Did you know that there are 11 species of bumble bees in Illinois? These amazing native pollinators eat nectar and pollen from a variety of flowers. At the end of summer, a bumble bee queens burrows below the soil to survive the winter. Leaving leaves, grasses, and a few dead limbs in your yard helps supports bumble bee habitats and populations!

INSTRUCTIONS:

1. Print off this sheet on regular or heavy weight paper.
2. Carefully cut along the solid white lines to create the individual jumble pieces. Some additional trimming may be needed.
2. Find a flat surface and mix up the individual pieces to create one big nature jumble pile.
4. Yay! Now you are ready to put the pieces back together to complete the image!
