

Nature Jumble

Did you know that monarchs in Illinois often produce three broods in summer with the final brood migrating to Mexico? You can help support and save the magnificent monarchs by planting native milkweed and wildflowers in your own backyard. Let's help protect these beloved butterflies and their habitat!

INSTRUCTIONS:

1. Print off this sheet on regular or heavy weight paper.
2. Carefully cut along the solid white lines to create the individual jumble pieces. Some additional trimming may be needed.
2. Find a flat surface and mix up the individual pieces to create one big nature jumble pile.
4. Yay! Now you are ready to put the pieces back together to complete the image!
